**BIOTINYLATED GOAT ANTI-RABBIT IgG +** 

**ACETYL-AVIDIN:BIOTINYLATED ALKALINE** PHOSPHATASE COMPLEX + Normal Goat Serum Code: FR11-6 Lot: Description: Kit for immunohistochemistry complete of:

- normal goat serum

- biotinylated affinity-purified goat anti-rabbit IgG (H+L) - pre-formed complex of modified avidin and biotinylated

alkaline phosphatase

Stabilized buffered stock solutions, to be diluted before use. Appearance:

Manufacturing date:

## **PRODUCT PROFILE**

Normal Goat Serum Suggested dilution 1:30 Biotinylated affinity-purified goat anti-rabbit IgG Lot: Suggested dilution 1: 200

- a) Purity: this product was isolated from antisera by immunoaffinity chromatography using antigens coupled to agarose beads.
- b) Antibody specificity: the antibody used for biotinylation reacts with the heavy chains on rabbit IgG and with light chains common to most rabbit immunoglobulins. No antibody was detected against non-immunoglobulin serum proteins. This antibody has been tested to ensure minimal cross-reaction with human serum proteins, but the antibody may cross-react with immunoglobulins from other species.

Modified avidin and biotinylated alkaline phosphatase complex

Suggested dilution 1: 200

a) Acetyl - avidin

Activity (biotin binding):  $6 \pm 2$  units/ml solution. Unit definition: one unit of avidin will bind 1 µg of biotin.

b) Alkaline phosphatase concentration: about 750 µg/ml solution.

Recommended storage conditions: 2-8 °C

Stability: 12 months

FOR GENERAL LABORATORY USE
