

Product:	BIOTINYLATED GOAT ANTI-RABBIT IgG + STREPTAVIDIN:BIOTINYLATED PEROXIDASE COMPLEX + Normal Goat Serum
Code:	GR14-6
Lot:	
Description:	Kit for immunohistochemistry complete of: - normal goat serum - biotinylated affinity-purified goat anti-rabbit IgG (H+L) - pre-formed complex of streptavidin and biotinylated peroxidase
Appearance:	Stabilized buffered stock solutions, to be diluted before use.
Manufacturing date:	

ml	Normal Goat Serum Suggested dilution 1: 30	Lot:	
ml	Biotinylated affinity-purified goat anti-rabbit IgG Suggested dilution 1: 250	Lot:	

PRODUCT PROFILE

- a) Purity: this product was isolated from antisera by immunoaffinity chromatography using antigens coupled to agarose beads.
- b) Antibody specificity: the antibody used for biotinylation reacts with the heavy chains on rabbit IgG and with light chains common to most rabbit immunoglobulins. No antibody was detected against non-immunoglobulin serum proteins. This antibody has been tested to ensure minimal cross-reaction with human serum proteins, but the antibody may cross-react with immunoglobulins from other species.

- ml Streptavidin and biotinylated peroxidase complex Lot: Suggested dilution 1: 250
- a) Streptavidin

Activity (biotin binding): 40 ± 15 units/ml solution. Unit definition: one unit of streptavidin will bind 1 µg of biotin.

b) Peroxidase concentration: (spectrophot. absorbt. at 403 nm; an extinction coefficient of 18.6 has been used): 2500 µg/ml solution.

Recommended storage conditions: 2-8 °C Stability: 12 months

FOR GENERAL LABORATORY USE
